

## Trigonometry

$\sin A = \frac{\text{opposite}}{\text{hypotenuse}}$	$\csc A = \frac{\text{hypotenuse}}{\text{opposite}} = \frac{1}{\sin A}$
$\cos A = \frac{\text{adjacent}}{\text{hypotenuse}}$	$\sec A = \frac{\text{hypotenuse}}{\text{adjacent}} = \frac{1}{\cos A}$
$\tan A = \frac{\text{opposite}}{\text{adjacent}}$	$\cot A = \frac{\text{adjacent}}{\text{opposite}} = \frac{1}{\tan A}$

$$\frac{\sin A}{\cos A} = \tan A$$

$$\begin{aligned}\sin(-A) &= -\sin A \\ \cos(-A) &= \cos(A)\end{aligned}$$

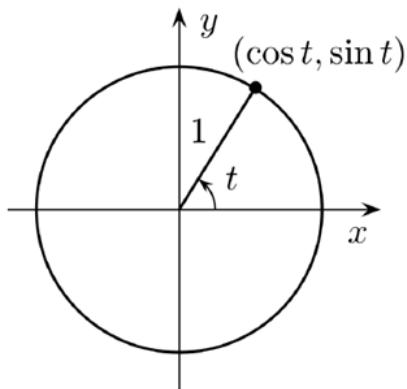

$$\begin{aligned}\sin A &= \cos(90^\circ - A) \\ \cos A &= \sin(90^\circ - A)\end{aligned}$$

$$\begin{aligned}\sin 2A &= 2(\sin A)(\cos A) \\ \cos 2A &= \cos^2 A - \sin^2 A\end{aligned}$$

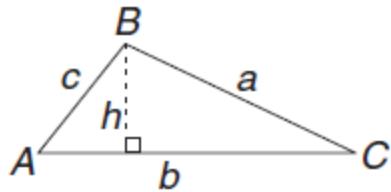

$$\begin{aligned}\sin^2 A &= 1 - \cos^2 A \\ \sin^2 A + \cos^2 A &= 1 \\ \cos^2 A &= 1 - \sin^2 A\end{aligned}$$

$$\begin{aligned}\tan^2 A + 1 &= \sec^2 A \\ \sec^2 A - \tan^2 A &= 1 \\ \sec^2 A - 1 &= \tan^2 A\end{aligned}$$

$$\begin{aligned}1 + \cot^2 A &= \csc^2 A \\ \cot^2 A &= \csc^2 A - 1 \\ 1 &= \csc^2 A - \cot^2 A\end{aligned}$$

## Trigonometry Formulas

$$\text{Area} = \frac{1}{2}ab \sin C$$

$$\text{Law of sines: } \frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

$$\text{Law of cosines: } b^2 = a^2 + c^2 - 2ac(\cos B)$$
