Practice Test

Probability

Questions 1-4 refer to the following information.

| | Economics | History | Music |
|--------|-----------|---------|-------|
| Male | 24 | 20 | 19 |
| Female | 18 | 22 | 17 |

The table above shows the distribution of a group of 120 college students by gender and major.

1

If one student is randomly selected from the group, what is the probability that the student is a History major?

- A) $\frac{36}{120}$
- B) $\frac{40}{120}$
- C) $\frac{42}{120}$
- D) $\frac{46}{120}$

2

If a male student is selected at random, which of the following is closest to the probability that he is a Music major?

- A) 0.270
- B) 0.302
- C) 0.317
- D) 0.381

3

If one student is randomly selected from the group what is the probability that the student is a male Economics major?

- A) $\frac{24}{120}$
- B) $\frac{42}{120}$
- C) $\frac{24}{42}$
- D) $\frac{24}{63}$

4

If a Music major is selected at random, which of the following is closest to the probability that the student is a female?

- A) 0.298
- B) 0.315
- C) 0.386
- D) 0.472

Questions 5 and 6 refer to the following information.

| | Under 30 | 30 or older | Total |
|--------|----------|-------------|-------|
| Male | 3 | | 12 |
| Female | | | 20 |
| Total | 8 | 24 | 32 |

The incomplete table above shows the distribution of age and gender for 32 people who entered a tennis tournament.

5

If a tennis player is chosen at random, what is the probability that the player will be either a male under age 30 or a female aged 30 or older?

- A) $\frac{15}{32}$
- B) $\frac{18}{32}$
- C) $\frac{20}{32}$
- D) $\frac{24}{32}$

6

If a person is selected at random from the 30 or older player group, what is the probability that the person is a female?

- A) $\frac{5}{20}$
- B) $\frac{15}{20}$
- C) $\frac{9}{24}$
- D) $\frac{15}{24}$

Questions 7 and 8 refer to the following information.

Number of Visits to Movie Theaters by Students

| | None | 1 to 2 | 3 or more |
|---------|------|----------------|----------------|
| Juniors | х | 2 <i>x</i> | $\frac{1}{2}x$ |
| Seniors | у | $\frac{5}{2}y$ | $\frac{1}{2}y$ |

The table above summarizes the number of visits to movie theaters by 168 juniors and 152 seniors during summer vacation.

7

If a student is selected at random from those who visited movie theaters at least once, what is the probability that the student is a junior?

- A) $\frac{16}{30}$
- B) $\frac{18}{39}$
- C) $\frac{20}{39}$
- D) $\frac{22}{30}$

8

If a student is selected at random, which of the following is closest to the probability that the student is a senior and visited movie theaters 1 or 2 times?

- A) 0.156
- B) 0.205
- C) 0.297
- D) 0.324

Answers

Probability

1. C

| | Economics | History | Music |
|--------|-----------|---------|-------|
| Male | 24 | 20 | 19 |
| Female | 18 | 22 | 17 |

There are 120 student total and 42 students are History majors. Therefore, the probability that the student is a History major is $\frac{42}{120}$.

2. B

There are 24 + 20 + 19 = 63 male students. If a male student is selected at random, the probability that he is a Music major is $\frac{19}{63} \approx 0.302$.

3. A

The probability that the student is a male Economics major is $\frac{24}{120}$.

4. D

There are 19+17, or 36, Music majors. The probability that a Music major selected at random is a female is $\frac{17}{36} \approx 0.472$.

5. B

| | Under 30 | 30 or older | Total |
|--------|----------|-------------|-------|
| Male | 3 | | 12 |
| Female | | | 20 |
| Total | 8 | 24 | 32 |

There are 3 males under age of 30. The number of males 30 years or older is 12-3=9. Therefore, the number of females 30 years or older is 24-9=15. The probability that the player will be either a male under age 30 or a female aged 30 or older is $\frac{3+15}{32} = \frac{18}{32}$.

6. I

There are 15 females who are aged 30 or older. If a person is selected at random from the 30 or older player group, the probability that the person is a female is $\frac{15}{24}$.

7. C

Number of Visits to Movie Theaters by Students

| | None | 1 to 2 | 3 or more |
|---------|------|----------------|----------------|
| Juniors | x | 2 <i>x</i> | $\frac{1}{2}x$ |
| Seniors | у | $\frac{5}{2}y$ | $\frac{1}{2}y$ |

There are 168 juniors and 152 seniors. Therefore,

$$x + 2x + \frac{1}{2}x = 168$$
, and $y + \frac{5}{2}y + \frac{1}{2}y = 152$.

Solving the equations give x = 48 and y = 38.

There are
$$2x + \frac{1}{2}x = \frac{5}{2}x = \frac{5}{2}(48) = 120$$
 juniors

and
$$\frac{5}{2}y + \frac{1}{2}y = 3y = 3(38) = 114$$
 seniors who

visited movie theaters at least once.

If a student is selected at random from those who visited movie theaters at least once, the probability

that the student is a junior is $\frac{120}{120+114}$, or $\frac{20}{39}$.

8. C

Seniors who visited movie theaters 1 or 2 times

is
$$\frac{5}{2}y = \frac{5}{2}(38) = 95$$
.

The probability that the student is a senior and visited movie theaters 1 or 2 times is

$$\frac{95}{320} \approx 0.297$$
